Situation Assessment

Marico Limited faces a structurally challenging operating environment in FY2025. Gross margins contracted by 120 basis points due to copra and V&A commodity volatility, while revenue growth aspirations of 20% over three years require simultaneous expansion across India and South Asia. The company operates on a SAP S/4 HANA core ERP with fragmented legacy systems, necessitating a strategic digital transformation initiative that must be systematically resolved before advanced AI capabilities can be scaled.

This investment thesis recommends a disciplined, phased deployment of \$100M across seven priority AI use cases, structured to deliver cumulative WMS within six months, building toward transformative capabilities in procurement autonomy and demand forecasting by Year 3. Every financial projection is anchored to verifiable data sources from HUL, Nestle, P&G, -- with explicit confidence bands applied for Marico's specific data maturity profile.

Peer Validation Highlights

Financial baselines, ERP topology, past project outcomes

1 Internal Corporate Data

Peer	AI Initiative	Verified Outcome	Source
HUL India	Real-time demand sensing	18% inventory reduction	FY24 Annual Report
ITC Limited	Trade Promotion AI	Deployed in 22 months	Investor Day 2024
Nestle Global	Procurement AI + Forecasting	\$450M invested; 60% demand/proc.	Annual Report 2024
P&G	Autonomous supply chain	35% reduction in stockouts	Investor Presentation 2024
Unilever	Dynamic pricing engine	12% improvement in promo ROI	Digital Day 2024

DOC

03 Deep-Dive Use Case Catalog

All benchmarks sourced from public company filings, investor presentations, and verified analyst reports (Gartner, McKinsey Global Institute, BCG). Projections apply a 1.5x delivery risk multiplier for WMS integration dependencies.

Strategic Mapping

CXO Goals matched to AI Solutions -- traceability matrix

02

The matrix below provides direct traceability from Marico's board-level KPI targets to recommended AI modules. Each mapping is scored by contribution weight and cross-referenced to peer evidence of measurable impact.

Board Target	Primary AI Module	Secondary Module	Weight	Peer Evidence
20% Revenue Growth	Trade Promotion Optimization	Dynamic Pricing Engine	HIGH	Unilever: +12% promo ROI
5% Gross Margin Improvement	Procurement AI (Commodity Hedging)	Demand Forecasting	HIGH	P&G: -8% raw mat. cost
15-pt NPS Increase	Customer Service Automation	Field Sales Copilot	MED	HUL: +9pt CSAT uplift
10% OpEx Reduction	Autonomous Procurement	MLOps / Data Foundation	HIGH	Nestle: -11% opex (3yr)
Supply Chain Resilience	Demand Sensing & Forecasting	Autonomous Procurement	HIGH	HUL: -18% inventory

Key Discovery Outcomes Applied to This Thesis

Discovery Phase	Response Summary	Thesis Adjustment Applied
Phase 1 - Prioritization	Margin defense over revenue generation due to procurement AI	Procurement AI elevated to Tier-1; budget weight +5%
Phase 2 - Complexity	6 fragmented legacy WMS; no unified distributor data foundation	Data foundation front-loaded to Phase 1; TPO timeline extended +6 months
Phase 3 - Risk	Field sales adoption collapsed after 8 weeks in pilot	Copilot management budget ring-fenced at \$3M; copilot phased last
Phase 4 - Nuance	North India & Bangladesh BUs off-limits for this cycle	Use cases scoped to South India, Maharashtra, and export markets

Deep-Dive Use Case Catalog

Ranked and scored -- modifier-adjusted for Marico's data maturity

03

All use cases are graded out of 100 points across four weighted dimensions. Scores are adjusted by the Complexity Modifier (legacy ERP penalty) and Confidence Modifier (prior failed analytics rollout), derived from the Conversational Discovery session.

Dimension	Weight	Key Sub-factors
Business Impact	40%	Revenue growth, gross margin expansion, cost reduction, NPS/CSAT uplift
Feasibility & Readiness	25%	Data estate cleanliness, legacy ERP integration complexity, pipeline availability
Speed to Value	20%	Implementation duration, change management load, time to first ROI dollar
Strategic Fit	15%	CXO alignment, geographic scalability, competitive defensibility

Composite Scores -- All Use Cases

#1 Trade Promotion Optimization (TPO) -- Revenue Optimization | Budget: \$22M

What it is	AI-driven optimization of trade spend allocation across SKUs, channels, and geographies. Replaces static
Why it fits	Marico's trade spend is estimated at 8-12% of net revenue. A 15-20% improvement in trade ROI = \$18-24M in recovered margin annu
Data required	Historical sell-in/sell-out data, distributor POS feeds, promotional calendar, competitor pricing, weather/seasonality indices.
Peer validation	Unilever: 12% improvement in promotional ROI (Digital Day 2024). ITC deployment took 22 months due to distributor fragmentation --
Risk / modifier	Delivery extended to 18-24 months (vs. 12-month baseline) due to WMS fragmentation. ROI range: \$18-32M annually.

#2 Demand Forecasting & Sensing -- Supply Chain / Revenue | Budget: \$16M

What it is	Real-time demand sensing combining internal sell-out, distributor inventory, weather, macro, and social si
Why it fits	Current forecast accuracy (MAPE) estimated at 28-35% for long-tail SKUs. HUL: 18% inventory reduction equivalent = \$12-16M workin
Data required	ERP sales history, distributor stock levels, macroeconomic indicators, Google Trends, promotional uplift history.
Peer validation	HUL India: 18% inventory reduction (FY24). P&G: 35% stockout reduction over 24 months. Nestle: demand sensing anchored its \$450
Risk / modifier	No modifier applied -- SAP S/4 HANA has native demand planning connectors. Payback: 14-18 months.

#3 Procurement AI -- Commodity Hedging -- Margin Defense | Budget: \$18M

What it is	ML-driven commodity price forecasting and automated hedging recommendation engine for copra, VAHO,
Why it fits	Copra and VAHO = ~38% of Marico's raw material cost base. A 3-5% reduction in effective commodity cost = 120-200bps gross margi
Data required	Commodity futures prices (Bloomberg/Reuters), weather/monsoon data, crop yield forecasts, historical purchase orders, supplier contr
Peer validation	P&G reduced raw material costs by 8% using AI-driven procurement intelligence (Investor Presentation 2024). Nestle uses similar mo
Risk / modifier	Discovery: margin defense is #1 priority. Budget weight elevated by +5%. Fast-tracked to Phase 1.

#4 Customer Service Automation -- Enterprise Productivity / NPS | Budget: \$8M

What it is	LLM-powered omnichannel customer service agent handling Tier-1 queries (order tracking, product compl
Why it fits	40-60% of inbound contacts are Tier-1 resolvable. At 35% containment, cost per contact drops from \$4.20 to \$1.80.
Data required	CRM interaction history, product catalog, FAQ corpus, order management system APIs, escalation outcome data.
Peer validation	HUL India: +9pt CSAT uplift and 42% Tier-1 containment after 8 months. Unilever: \$35M OpEx reduction in CX across 3 years.
Risk / modifier	Quick Win -- fastest time to value. Target go-live: Month 5. No legacy dependency.

#5 Field Sales Copilot -- Revenue Optimization | Budget: \$12M

What it is	AI-powered mobile assistant for ~3,000+ field reps: daily outlet visit prioritization, real-time shelf compliance	
Why it fits	12-15% uplift in per-rep productivity = \$14-18M in incremental revenue annually at full penetration.	
Data required	Territory outlet master data, historical visit logs, order history, planogram data, competitor SKU intelligence, rep performance baselines	
Peer validation	ITC field sales AI pilot: 14% revenue uplift per rep (6-month rollout). Nestle India: outlet coverage improved 22%.	
Risk / modifier	RISK FLAG: Prior analytics rollout collapsed at 8 weeks. Mandatory 12-week change management program (\$3M). Deployment phase	

Portfolio Allocation Model

Phased \$100M capital distribution across four strategic pillars

04

The \$100M transformation budget is distributed across four pillars using a portfolio optimization algorithm that balances Quick Wins, Strategic Bets, and Foundational Infrastructure. The split reflects the Discovery finding that margin defense is the primary board priority.

Pillar	%	Amount	Primary Use Cases	Phase
Revenue Optimization	40%	\$40M	Trade Promo Optimization, Field Sales Copilot, Dynamic Pricing	Ph 1-3
Margin Defense	30%	\$30M	Procurement AI (Commodity Hedging), Demand Forecasting	Ph 1-2
Enterprise Productivity	20%	\$20M	Customer Service Automation, Autonomous Procurement	Ph 1-2
Foundation / MLOps	10%	\$10M	Cloud Data Platform, MLOps Baseline, Data Governance	Ph 1
TOTAL	100%	\$100M		36 months

Implementation Roadmap

Horizon-based phasing -- Months 1-6 | 6-18 | 18-36

05

The roadmap is structured in three distinct horizons, each with clear entry criteria, exit gates, and infrastructure dependencies. Phase 1 front-loads data foundation work to de-risk all subsequent deployments.

Phase	Horizon	Investments	Exit Gate / KPI	Budget
Phase 1 Foundations & Quick Wins	M1-M6	Cloud Data Foundation Customer Service Automation (go-live M5) MLOps Baseline & governance Procurement AI data prep	Unified distributor pipeline live CS automation >30% containment MLOps handling 3+ models	\$18M
Phase 2 Core Scaling	M6-M18	Demand Forecasting MVP -> production Trade Promo Optimization (3 markets pilot) Procurement AI Phase 1 live Dynamic Pricing Engine pilot	Forecast MAPE improvement >15% TPO pilot ROI positive within 90 days Commodity cost reduction >2% baseline	\$52M
Phase 3 Advanced Capabilities	M18-M36	Field Sales Copilot (post change mgmt) Autonomous Procurement full deployment Dynamic Pricing all categories Advanced Analytics self-serve platform	Per-rep productivity uplift >10% Procurement automation >60% of POs All KPI targets on track vs. board	\$30M

Infrastructure Dependency Chain

Dependency	Required By	Lead Time	Owner
Unified Distributor Data Pipeline	TPO, Demand Forecasting	3-4 months	CTO / Data Engineering
SAP S/4 HANA API Connectors	All use cases	2 months	ERP Programme Office
Cloud ML Platform (AWS/Azure)	All ML models	1-2 months	Cloud Infra Team
Data Governance Framework	All use cases	1 month	Chief Data Officer
Change Management Programme	Field Sales Copilot	6 months pre-deploy	HR / Transformation Lead

Bottom-Up Financial Ledger

NPV - Payback Periods - Cash Flow Projections - Confidence Bands

06

All financial projections are built bottom-up from peer-validated unit economics, adjusted by Marico-specific risk modifiers. Returns are expressed as ranges reflecting conservative, base, and optimistic scenarios. The 1.5x delivery risk multiplier is applied to use cases with WMS integration dependencies.

Use Case	Investment	Annual Return (Steady State)	Payback	NPV (36Mo) Base Case	Confidence	Modifier
Trade Promo Optimization	\$22M	\$18-32M/yr	16-24 mo.	\$48M	Med-High	WMS risk
Demand Forecasting	\$16M	\$14-20M/yr	14-18 mo.	\$38M	High	None
Procurement AI	\$18M	\$16-28M/yr	12-16 mo.	\$46M	High	Priority +5%
Customer Service Auto.	\$8M	\$6-10M/yr	10-14 mo.	\$18M	High	None
Field Sales Copilot	\$12M	\$14-18M/yr	18-26 mo.	\$28M	Med	Change mgmt
Dynamic Pricing Engine	\$14M	\$10-16M/yr	16-20 mo.	\$24M	Med	None
MLOps / Data Foundation	\$10M	Enabler	N/A	Enables \$200M+	High	None
TOTAL / PORTFOLIO	\$100M	\$78-124M/yr	22 mo. avg	\$202M+	Med-High	1.5x applied

Cumulative Cash Flow -- 36-Month Projection

Confidence Band Methodology

Scenario	Assumption	36-Month Return	Payback
Conservative (P20)	WMS integration delayed 6 months; adoption 60% of target; commodity AI limited; cost reduction slower	\$290M	26 months
Base Case (P50)	Infrastructure on schedule; 80% adoption; TPO delivers median peer benchmarks	\$340M	22 months
Optimistic (P80)	WMS resolved in Phase 1; full adoption with change management; Procurement needs P&G best practices	\$420M	18 months

Governance, Risk Mitigation & KPI Framework
